

Geocurve becomes the first company in the UK to achieve Congested Area Operations permission

Image courtesy of Ascending Technologies GmbH

The Civil Aviation Authority (CAA) have granted Geocurve approval to fly UAVs (Unmanned Aerial Vehicles) in congested urban areas, making us the first company in the UK to achieve this status.

conduct aerial operations in previously prohibited areas. This will open new doors for our customer base allowing us to carry out surveys and inspections, among other projects, in urban environments.

By submitting detailed safety records and risk mitigation, Geocurve has gained approval under the CAA's Congested Area Operations Safety Case to

In conjunction with existing permissions and a track record within topographic survey and inspection dating back to 2004, Geocurve remains the leading provider of specialist survey services.
